Portfolio mandate

Objective/investment policy

The primary objective of the Imara MET Balanced Fund is to offer investors an inflation-beating long term total return with a moderate risk profile. The portfolio will be managed in compliance with prudential investment guidelines for retirement funds in South Africa to the extent allowed for by the Act. In order to achieve its objective, the investments normally to be included in the portfolio may comprise a combination of assets in liquid form, money market instruments, interest bearing instruments, bonds, debentures, corporate debt, equity securities, property securities, preference shares, convertible equities, derivatives and non-equity securities. The manager may also invest in participatory interests or any other form of participation in portfolios of collective investment schemes or other similar collective investment schemes as the Act may allow from time to time, and which are consistent with the portfolio's investment policy. Where the aforementioned schemes are operated in territories other than South Africa, participation in portfolios of these schemes will be included in the portfolio only where the regulatory environment is of sufficient standard to provide investor protection at least equivalent to that in South Africa. The portfolio may from time to time invest in listed and unlisted financial instruments, in order to achieve the portfolio's investment objective. The manager may also include forward currency, interest rate and exchange rate swap transactions for efficient portfolio management purposes. The portfolio's net equity exposure will range between 0% and 75% of the portfolio's net asset value. The trustee shall ensure that the investment policy is adhered to, provided that nothing contained in the investment policy shall preclude the manager from varying the proportions of the aforementioned securities and assets in liquid form, or the assets themselves, should changing economic factors or market conditions so demand.

- Maximum property 25%.
- Maximum exposure of 25% to offshore investments plus maximum of 5% in Africa.

This portfolio is permitted to invest in foreign securities which, within portfolios, may have additional material risks, depending on the specific risks affecting that country, such as: potential constraints on liquidity and the repatriation of funds; macroeconomic risks; political risks; foreign exchange risks; tax risks; settlement risks; and potential limitations on the availability of market information. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down. Investors are reminded that an investment in a currency other than their own may expose them to a foreign exchange risk.

Performance is calculated for a portfolio/portfolio class. Individual investor returns may differ as a result of fees, actual date(s) of investment, date(s) of reinvestment of income and withholding tax. Annualised returns, also known as Compound Annualised Growth Rates (CAGR), are calculated from cumulative returns; they provide an indication of the average annual return achieved from an investment that was held for the stated time period. Actual annual figures are available from the Manager on request. Performance figures quoted are from Morningstar, as at 30/04/2015, for a lump sum investment, using NAV-NAV prices with income distributions reinvested on the ex-dividend date. CPI/Inflation figures, where present, are lagged by one month.
